Application/Control Number: 10/708,917

Art Unit: 2824

## **DETAILED ACTION**

1. This action is responsive to the following communications: the Application and the Information Disclosure Statement filed on March 31, 2004.

2. Claims 1 – 13 are pending in this case. Claims 1, 2, and 8 are independent claims.

## Allowable Subject Matter

3. Claims 1 - 13 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claim 1, in addition to other elements in the respective claims, the prior art of record fails to teach or suggest "both said first pair and said second pair of complementary bitlines having twist at a location corresponding to about ¼ of the total length of the bitline structure; said second pair of complementary bitlines further having a twist at a location corresponding to about ½ of the total length of the bitline structure; and both said first pair and said second pair of complementary bitlines having a twist at a location corresponding to about ¾ of the total length of the bitline structure".

With respect to claims 2 and 8, in addition to other elements in the respective claims, the prior art of record fails to teach or suggest "each associated with a number N of wordline rows; both said first pair and said second pair of complementary bitlines having a twist at a location corresponding to about an N/4 row location; said second pair of complementary bitlines further having a twist at a location corresponding to about an N/2 row location; and both said first pair and said second pair of complementary bitlines having a twist at a location corresponding to about a 3N/4 row location"

Application/Control Number: 10/708,917

Art Unit: 2824

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Roth et al. (Pub. No.: US 2002/0056912 A1) discloses a portion of the first bit line is formed in the first conductive layer and crosses under the second bit line to the other side of the second bit line in a bit line twisting area.

Noro (patent No.: US 6,795,331 B2) discloses a cell array region where said plurality of memory cells are provided, a twist region where said bit lines cross over is provided; and said correction capacitors are formed within said twist region.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## **Contact Information**

Any inquiry concerning this communication from the examiner should be directed to Dang Nguyen, who can be reached by telephone at (571) 272-1955. Normal contact times are M-F, 8:00 AM - 4:30 PM.

Upon an unsuccessful attempt to contact the examiner, the examiner's supervisor, Richard Elms, may be reached at (571) 272-1869.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist, whose telephone number is (703) 305-3900. The faxed phone number for organization where this application

Art Unit: 2824

or proceeding is assigned is (703) 872-9306.

Information regarding the Status of an application may be obtained from the patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free) or EBC@uspto.gov.
